Filter units, syringe, non-sterile, Millex®

- For sample preparation prior to instrumental analysis, suitable for coarse to fine filtration of aqueous, organic and aqueous/organic mixture solutions
- Available in a variety of membrane types, including Durapore® (hydrophilic PVDF), Fluoropore™ (hydrophobic PTFE), hydrophilic nylon, LCR (hydrophilic PTFE) and Express® PLUS (hydrophilic PES)
- Five different sizes 4mm, 13mm, 25mm, 33mm and 50mm

Durapore® hydrophilic PVDF membrane

Ultra low protein binding. High flow rates and throughput, low extractables and broad chemical compatibility. For aqueous and mild organic solutions.

Fluoropore™ hydrophobic PTFE membrane

Extreme chemical compatibility for organic solutions. Can also be used to filter aqueous solutions if pre-wet with alcohol and then rinsed with water.

Hydrophilic nylon membrane

Compatible with a broad range of solvents.

LCR hydrophilic PTFE membrane

Compatible with all commonly used HPLC solvents. Can be used to filter aqueous fluids without prior wetting. Low protein binding.

Express® PLUS hydrophilic PES membrane

Provides ultrafast filtration of tissue culture media, additives, buffers and other aqueous solutions. High throughput and low protein binding.

All have female Luer-Lok® inlet and male luer slip outlet (4mm units have a stepped outlet), except 12501259 which has a tube outlet.

4mm diameter (Stepped male luer slip outlet, female Luer-Lok® inlet)
